SONIC – A perfect stop for the euphonious musical journey

Nowadays, a music player is receiving discernable attention as an active part of every person's life irrespective of the generation they belong to. Every generation has had its own source of enjoying and consuming music. However, the substantial usage of music apps in our lives can lead the way to detrimental health issues in human lives. Hence, the need for such an app is required which will unite people together in the best possible way, help boost moods, create an ambiance, broaden their imagination, enable them to have a personalized experience and if used prudently; benefit them in their marginal as well as significant tasks. The distinct feature of SONIC, as compared to its peers, is that it is entirely free for the users, provides a light-weight music experience and also saves the user's storage space. It also comprises of fresh features like the 'coming soon' button, the 'country comfort' button, the 'screen time' button and the 'sleep timer' button in addition to all the features found in any music app. This project will be worked in two phases; the first being the phase where the work will entirely involve the insertion of all the basic features found in somewhat all music apps whereas the second phase will thoroughly focus on the introduction of certain new and fresh features which have yet not been established in any current music apps. When paired with the finest features of all time, this music player project will not only get to grips with our mind and body wellness but also upraise our frame of mind. With its simplicity, convenient and user-friendly features, SONIC will certainly prove advantageous to all the music lovers in numerous unique ways at an individual as well as societal levels.
